

SIMPLIFIED APPLIANCE BASED FAX SOLUTION

Organizations are considering voice, fax and data resources to cut costs and simplify their communications infrastructure. Voice over IP (VoIP) and Fax over IP (FoIP) are two technologies which have become critical to organizations as they create a unified strategy for voice and data communications. These technologies allow companies to reduce their total cost of ownership by eliminating telephony hardware and consolidating the management of voice, data and fax communications.

Because IP PBX's are software based and rely on voice optimized compression, many businesses have experienced high fax transmission failure rates, often greater than 40%. FaxAgent has been architected to address this issue and provide organizations a robust and reliable fax solution that integrates with their IP PBX environment. The FaxAgent system leverages the T.38 capability of leading IP gateways, including AudioCodes, Cisco, 3COM, Alcatel and Patton.

- Send and Receive Faxes Anywhere
- Reduce Fax Costs
- Increase Security
- Easy Administration
- Fast to Deploy
- Reliable Transmission

Certified IP Gateways

**Capture Faxes
Via Email**

**Fax Enable
Applications**

FaxAgent provides organizations with a robust solution to improve the efficiency of fax, paper and electronic document processes. This enables any size company to significantly reduce operating costs. By using an Axacore FaxAgent appliance, companies can securely deliver business information from any application via fax, email, network printers or the Internet.

Scalable Platform Ready to Deploy

FaxAgent is a hardware appliance built on an optimized Microsoft Windows Server based operating system. The application software is entirely web based. The appliance is shipped configured and ready to quickly fax enable your environment. The FaxAgent appliance is tested and certified for carrier level environments. No operating system or application software is required.

Easy Outlook Integration

Create, send, receive and manage faxes directly within Microsoft Outlook -- organize, forward and respond to your faxes exactly the same as email messages. Use the web delivery feature to reduce fax volume on your mail server by sending only email notifications with hyperlinks to access fax transmissions stored in the FaxAgent archive.

Document Archiving

FaxAgent maintains a secure history of all sent and received faxes. Users are able to easily access their own fax archive. Automatic content expiration allows administrators to manage storage needs. The standard appliance has the capacity to store over 12M fax pages and can easily be expanded.

Single Sign-On

FaxAgent includes integrated security options for Microsoft Active Directory, IBM Lotus Notes and other LDAP standard service providers. FaxAgent can automatically create new accounts when users first logon to help with large scale deployments.

Fault Tolerant Architecture

FaxAgent is designed to be fault-tolerant and can be configured with one or more application servers to load-balance workloads and guarantee uptime. FaxAgent servers can work with mainstream SANs, NAS storage servers or direct-attached disk solutions. FaxAgent uses a built-in workflow queueing engine to handle even the most demanding transaction based environments.

Unlimited Users and Simple Pricing

FaxAgent uses a server based pricing model to simplify licensing. The system includes unlimited user accounts and system profiles. Axacore believes in a simple per concurrent fax transmission pricing model. You won't find a complicated list of add-on modules for Outlook, back-office integration or web viewers.

Server Specification

- 64-BIT Quad Core Processor
- 4 GB ECC RAM
- Gigabit Ethernet Ports
- 500 GB Storage Array

Disk Subsystem

- Hot-swap removable disk bays
- Integrated RAID controller
- SMART disk drive monitoring
- Email alert notification for drive repair
- Externally Expandable to 4 TB
- Dedicated system restore partition

Operating System

- Windows Server 2003 Embedded
- Firewall hardened network interfaces
- Integrated Active Directory Security
- Integrated Lotus Notes Security
- Integrated SQL Server Support

System Monitoring

- Integrated Front Panel LCD
- Check fax transmission activity
- Web based activity monitoring
- Visual system trouble indicators
- Telco Diagnostic Tools
- Backup and restore utilities
- Critical update support agent

Mounting Options

- Small footprint - only 14" deep
- Universal Rack Mounts
- Vertically stand next to other servers

Enterprise Support

- Three year system warranty
- Next business day replacement
- Advanced system exchange service
- Carrier Certified Design
- Telephone and Email Tech Support
