
Business Profile

You are a mortgage company or a mortgage application software provider looking to integrate the most efficient Electronic Document Management (EDM) system available into your loan processing application.

With XDOC You Get

- Native web-based architecture which makes implementation faster, configuration easier, using the application more intuitive and supports smoother collaboration models with your partners
- An EDM solution without the complexity of legacy systems. It's cheaper to implement, cheaper to operate, easier to buy
- Advanced EDM features for document capture and management, security, compliance support, scalability and business continuity assurance
- Simple integration to give your application the power of electronic documents throughout your loan process, anytime from anywhere
- Software written natively for the web, with over 75 mortgage company installs

Design Philosophy

When we set out to develop this next generation EDM system, we started with many years of mortgage industry and EDM experience, a clean slate for the technical architecture and clearly defined engineering design criteria.

Key Design Specifications

- Purpose-built and powerful Electronic Document Management system for the mortgage industry
- Uncompromising document security, compliance support and business continuity features
- Future proof technology and performance using standard hardware and proven web architectures for scalability and redundancy
- Native browser interfaces for all user and administration functions
- Industry leading performance for viewing and working with documents
- Easy and straightforward integration into business process systems (e.g. LOS and loan processing systems)

How to Buy

Contact Axacore for a demonstration or discussion on how XDOC can solve your electronic document needs.

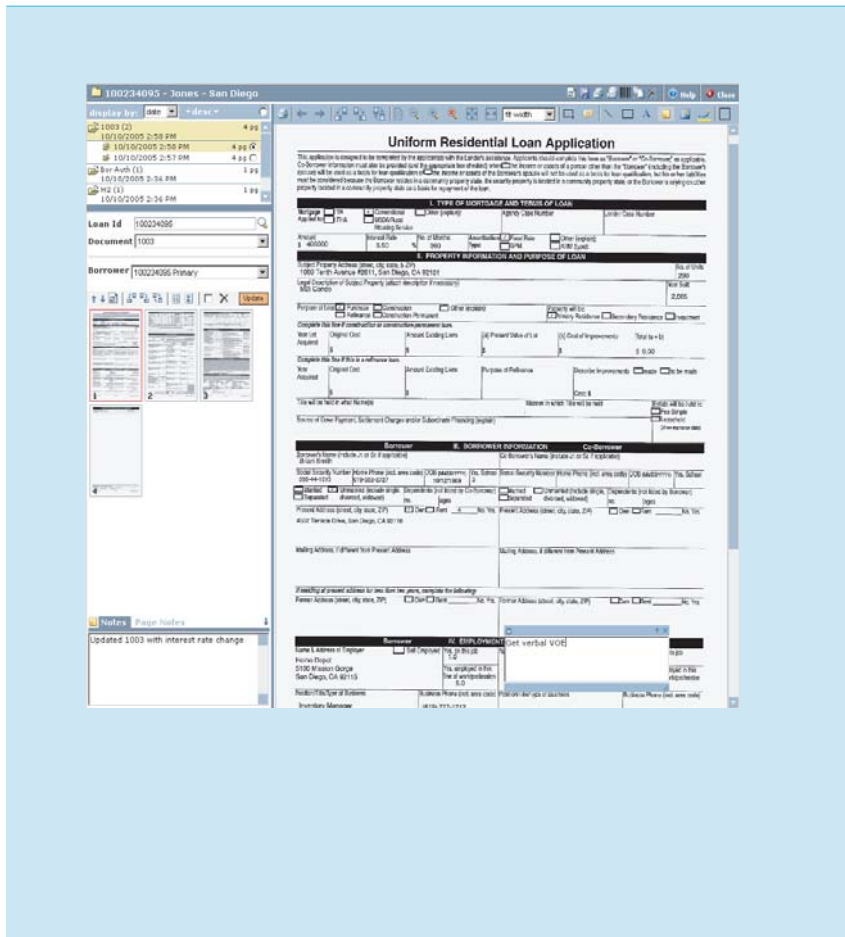

XDOC is built to optimize the process flow of the document intensive mortgage loan processing environment. See the power of XDOC and experience the improvement in business productivity achievable with this latest EDM technology!

Features and Functions

XDOC is designed to be a robust, full featured EDM system to support demanding mortgage loan processing environments.

EDM for the Mortgage Industry
available to your application through integration.

- Automatic capture of documents from any input source including scanners, printers, multi-function copiers, enterprise fax servers, fax to email providers, and email gateways
- Intelligent scan client, print client, and web interfaces for indexing, splitting, and assigning documents to loans
- Configurable file structure and workflow
- Virtual Loan File implementation
- Automatic barcode detection for form identification and data capture
- Definable document types and field indexes
- Document versioning
- Packaging and delivery of documents via email, http, ftp, and specific investor formats
- Web access to all documents throughout the loan process via standard browser interfaces
- Full annotation support including highlights, text, and stamps
- Rapid image display with ability to pan, zoom, and scale
- Filters and image adjustment for hard to read documents
- Export of documents in multi-page PDF or TIF formats with advanced PDF features including password protection, bookmarks, and annotations

Integration Features for Mortgage Loan Processing

- API for the mortgage industry allows easy 3-step integration process
- Integrated login and user authentication through your loan processing system
- External document container (virtual loan folder) API for attaching loan documents to entities in the loan processing application
- External search integration for simultaneously searching inside your application and XDOC
- Ready to go out of the box - no custom user interface or application logic development necessary.
- Flexible configurability lets you adopt XDOC to your environment where required
- Advanced customization toolkits and APIs available for custom feature development

Key Business Facts

Mortgage Industry Proven Scalability

- Industry's only fully featured HTML browser image viewer with no ActiveX or Java requirements
- Native browser based user interfaces and administrative screens
- Collaboration with internal groups and external partners, such as investors, MI companies and outsourced underwriters
- Customizable look and feel via style sheets, themes and user interface controls
- Document conversion of any office document into a web viewable format
- Distributed processing using web services for high volume and best-in-class scalability

Engineered for Security, Compliance, and Business Continuity

- Supports https, ssl, and all standard internet security protocols
- Supports third party NAS and data storage devices and fault tolerant disk configurations
- User and document security configurable to the page level
- Automated archiving of documents with metadata to back up storage devices
- Event tracking configurable to the document and page level

Lowest Total Cost of Ownership, Straightforward Pricing

- Advanced architecture, central administration, no client software required
- Capacity scaling with standard IT hardware
- Fast implementation
- Simple server based pricing
- No transaction or usage fees, unlimited users

About Axacore

Axacore is a privately-held core technology provider of faxing and document imaging solutions. Axacore develops solutions that help organizations streamline paper-intensive business processes and automate the flow of documents to team members, customers, partners, and vendors.

Headquartered in San Diego, California, Axacore is committed to excellence in product development and customer support while maintaining a technological edge. Key products include FaxAgent, ScanAgent, and XDOC.

How to Buy
